An eye-opening and vital account of the future of our earth and our civilisation if current rates of global warming persist, by the highly acclaimed author of 'High Tide'.

Picture yourself a few decades from now, in a world in which average temperatures are three degrees higher than they are now. On the edge of Greenland, rivers ten times the size of the Amazon are gushing off the ice sheet into the north Atlantic. Displaced victims of North Africa's drought establish a new colony on Greenland's southern tip, one of the few inhabitable areas not already crowded with environmental refugees. Vast pumping systems keep the water out of most of Holland, but the residents of Bangladesh and the Nile Delta enjoy no such protection. Meanwhile, in New York, a Category 5-plus superstorm pushes through the narrows between Staten Island and Brooklyn, devastating waterside areas from Long Island to Manhattan. Pakistan, crippled by drought brought on by disappearing Himalayan glaciers, sees 27 million farmers flee to refugee camps in neighbouring India.

Its desperate government prepares a last-ditch attempt to increase the flow of the Indus river by bombing half-constructed Indian dams in Kashmir. The Pakistani president authorises the use of nuclear weapons in the case of an Indian military counter-strike. But the biggest story of all comes from South America, where a conflagration of truly epic proportions has begun to consume the Amazon...

Alien as it all sounds, Mark Lynas's incredible new book is not science-fiction; nor is it sensationalist. The six degrees of the title refer to the terrifying possibility that average temperatures will rise by up to six degrees within the next hundred years. This is the first time we have had a reliable picture of how the collapse of our civilisation will unfold unless urgent action is taken.

Most vitally, Lynas's book serves to highlight the fact that the world of 2100 doesn't have to be one of horror and chaos. With a little foresight, some intelligent strategic planning, and a reasonable dose of good luck, we can at least halt the catastrophic trend into which we have fallen. But the time to act is now.

## Reviews

'Scientists predict that global temperatures will rise by between one and six degrees over the course of this century and Mark Lynas paints a chilling, degree-by-degree picture of the devastation likely to ensue unless we act now... "Six Degrees" is a rousing and vivid plea to choose a different future.' Daily Mail

'Buy this book for everyone you know: if it makes them join the fight to stop the seemingly inexorable six degrees of warming and mass death, it might just save their lives.' New Statesman

'An apocalyptic primer of what to expect as the world heats up...it's sobering stuff and shaming too. Despite its sound scientific background, the book resembles one of those vivid medieval paintings depicting sinners getting their just desserts.' Financial Times

'The saga of how, in the world as imagined by thousands of computer-modelling studies, global warming kicks in degree by degree. "Six Degrees", I tell you now, is terrifying.' The Sunday Times

'A chilling read.' Socialist Review

#### About the author

Mark Lynas is an activist, journalist and traveller. He was editor of the website [www.oneworld.net](http://www.oneworld.net) and has made many appearances in the press and TV as a commentator on environmental issues. He also throws custard pies at lunatics who pronounce global warming a fantasy. He is the author of 'High Tide: News from a Warming World'. He lives in Oxford.
